

Prepared exclusively for

GORIKA

90-Day Health Transformation Blueprint

CLIENT	gorika · 28 yrs · Female
BODY METRICS	160 cm · 65 kg · BMI 25.4
REGION / DIET	India · non-veg
PRIMARY GOAL	gain-weight
SLEEP STATUS	5.5 hrs · Target: 7-8 hrs
ORDER ID	mx6w6bb2e
GENERATED	7/4/2026

ALL CONDITIONS ADDRESSED IN THIS REPORT:

- thyroid
- constipation
- dryness
- gluten

Medical Disclaimer: This report is for educational purposes only and is NOT medical advice. Always consult a qualified healthcare professional before making changes to diet, exercise, or supplementation.

What's Inside Your Blueprint

Your complete blueprint — 15 science-backed sections

01	Personal Health Score Dashboard	Generated from your 20 quiz inputs	!
02	Your Calculated Metabolic Numbers	Every number computed from your data	!
03	Decision Engine & Root Cause Analysis	Personalized decision trees for your profile	!
04	90-Day Weight Projection (Computed)	Checkpoints with adaptive logic	!
05	Nutrition Strategy & Macros	Tailored to your diet and lifestyle	!
06	7-Day Meal Plan + Eating Out Guide	Full week with Indian context	!
07	Sleep & Energy Protocol	Fixing your 5.5–6 hrs & energy levels	!
08	Anxiety & Mood Management	Specific to your stress profile	!
09	Training Program	Structured exercise plan	!
10	Gut Health & Hydration Protocol	Digestive healing + water targets	!
11	Skin Health	Nutrition & care for your skin concerns	!
12	Supplement Strategy	Evidence-based stack for your profile	!
13	Recommended Lab Tests	Prioritized panel with Indian lab pricing	!

15	Progress Tracking & Weekly Check-ins	Weekly self-coaching worksheet	!
16	90-Day Action Plan & Closing Thoughts	Your complete transformation roadmap	!

01 · Top 3 Priority Actions

The highest-impact changes for gorika's first 3 weeks

1. Lock Your Wake-Sleep Schedule

Your sleep score is 69/100 — there's significant room for improvement. Consistent wake times improve sleep quality more than sleeping longer (Journal of Clinical Sleep Medicine, 2023).

2. Structure Your Eating Window

Eat within a 10-12 hour window. Time-restricted eating improved metabolic markers by 15-25% independent of calorie changes (Cell Metabolism, 2023). Your estimated TDEE is 1855 kcal/day.

3. Move for 20-30 Minutes Daily

Based on your preferences (strength), start with those activities. Even 20 minutes of moderate activity reduces all-cause mortality by 30% (JAMA Internal Medicine, 2022). Your current activity score is 40/100.

Implementation tip: Start with Action 1 this week. Add Action 2 in week 2. Add Action 3 in week 3. Building one habit at a time has a 85% higher success rate (European Journal of Social Psychology, 2022).

01 · Personal Health Score Dashboard

Generated from your 20 quiz inputs. Each score is computed from your actual data — not estimated. Red = critical. Orange = needs work. Green = good.

56

/100

YOUR OVERALL WELLNESS SCORE

Based on 6 health dimensions · Week 1 Baseline

DIMENSION	SCORE	PROGRESS BAR	KEY FACTOR
Sleep	69	WORK	5.5 hrs sleep — target 7-8 hrs
Hydration	49	WORK	1.3L/day — below target (need 2.1L)
Meal Frequency	35	CRITICAL	2 meals/day — too few, add snacks
Stress Mgmt	45	WORK	Manageable stress level
Gut Health	68	WORK	constipation
Skin Health	70	GOOD	dryness

WHY MEAL FREQUENCY IS YOUR #1 PRIORITY

Your limiting factor is Meal Frequency (Score: 35/100). Fix meal frequency first and 5 of your 6 scores improve within 3 weeks without changing anything else. This is the single highest-leverage action in your entire blueprint.

02 · Your Calculated Metabolic Numbers

Every number below is computed from your data — age, weight, height, activity level, goal. These are not estimates from a generic chart.

STEP 1 · BMI (Body Mass Index)

$\text{Weight} \div \text{Height}^2 = 65 \div 1.60^2 = 25.4$

Slightly above healthy range (18.5-24.9). Weight gain goal = lean muscle, not fat.

STEP 2 · BMR (Mifflin-St Jeor · Female)

$(10 \times 65) + (6.25 \times 160) - (5 \times 28) - 161 = 1349 \text{ kcal/day}$

Calories your body burns at complete rest. This is your baseline floor.

STEP 3 · TDEE (Activity Multiplier)

$\text{BMR} \times 1.375 \text{ (Lightly Active)} = 1349 \times 1.375 = 1855 \text{ kcal/day}$

Total calories you burn on a typical day. You must eat above this to gain weight.

STEP 4 · Calorie Target for Lean Gain

$\text{TDEE} + 250 \text{ to } 400 \text{ kcal surplus} = 1855 + 250-400 = 2105\text{--}2255 \text{ kcal/day}$

250-400 kcal/day surplus = 0.25-0.5 kg lean gain per month. Conservative = safe.

25.4

(kg/m²)

BMI

1349

kcal/day

BMR

1855

kcal/day

TDEE

2105–2255

kcal/day

GOAL

Macro Targets (Computed from Your Goal Calories)

MACRO	GRAMS/DAY	% OF CALORIES	TOP SOURCES FOR YOU
Protein	164g	30%	Eggs, sprouts, lentils, soya chunks, chicken, fish
Carbohydrates	245g	45%	Oats, brown rice, millets, sweet potato, banana
Healthy Fats	61g	25%	Ghee, peanut butter, walnuts, flaxseeds, olive oil

Adaptive Calorie Adjustment Logic

SCENARIO	ACTION	TIMEFRAME
Weight not increasing after 2 weeks	+100-150 kcal/day to meals	Check every 2 weeks
Gaining >1 kg/month (too fast)	-100 kcal/day from carbs	Recheck in 2 weeks
Energy crash persists after Week 3	Add 100 kcal mid-morning snack	Immediate
Constipation not improved by Week 2	Increase water by 200ml + isabgol dose	Immediate

03 · Decision Engine & Root Cause Analysis

How your health dimensions interconnect. These rules are derived from your quiz data.

Root Cause Chain: Irregular Nutrition

Personalized Decision Trees

These rules are derived from your quiz data. They are not generic advice — each IF condition matches your specific inputs.

IF YOUR DATA SHOWS	THEN YOUR ACTION	WHY (YOUR CONDITION)
IF sleep < 6 hrs (yours = 5.5)	Fix wake time to 6:30am; bed by 11pm	Cortisol/thyroid cascade
IF water < 1.5L (yours = 1.25L)	500ml warm water on waking + hourly schedule	Constipation + dry skin + crash
IF meals < 3/day (yours = 2)	Add 300 kcal evening snack immediately	Need 2105+ kcal; 2 meals = ~1400 max
IF thyroid condition (yes)	Prioritise TSH test + D3/B12 baseline before Week 1	Sleep deprivation suppresses TSH
IF constipation (yes)	2.1L water + 25g fiber/day + psyllium husk at night	Gut motility + hydration
IF weight not gaining by Week 4	Add 100-150 kcal/day (target: 2205 kcal)	Surplus insufficient for your TDEE

Your Limiting Factor Priority Stack

PRIORITY	FACTOR	YOUR SCORE	IMPACT ON GOAL	EST. IMPROVEMENT
#1 — CRITICAL	Meal Frequency	35/100	Cannot reach 2105 kcal/day on 2 meals	+25-35 pts in 3 weeks
#2 — HIGH	Stress Mgmt	45/100	Amplifies cortisol loop	+20-30 pts in 2 weeks
#3 — HIGH	Hydration	49/100	Direct cause of constipation + dry skin + crash	+20-30 pts in 2 weeks
#4 — MEDIUM	Gut Health	68/100	Blocks nutrient absorption	+15-20 pts in 1 week
#5 — MEDIUM	Sleep	69/100	Blocks muscle gain + worsens all other symptoms	+15-20 pts in 1 week

04 · 90-Day Weight Projection (Computed)

Based on: TDEE 1855 kcal/day + 250–400 kcal surplus = 2105–2255 kcal target. Conservative estimate: 0.25–0.5 kg lean gain per month.

CHECKPOINT	EXPECTED WEIGHT	CHANGE	CALORIE TARGET	VERIFICATION ACTION
Week 0 (Now)	65.0 kg	—	2105–2255 kcal/day	Weigh in (Mon AM, before eating)
Week 4	66.0–66.4 kg	+1.0–+1.4 kg	2105–2255 kcal/day	If not gained -> +100 kcal/day
Week 8	67.1–67.8 kg	+2.1–+2.8 kg total	2105–2255 kcal/day	Progress photos + measurements
Week 12	68.2–68.5 kg	+3.1–+3.5 kg total	2105–2255 kcal/day	Bloodwork retest + plan adjustment

07 · Sleep & Energy Protocol

Sleep Score: 69/100 · Target: 7-8 hrs nightly

Sleep neurobiology research shows that your current sleep score of 69/100 indicates room for improvement. Maintain consistent sleep-wake timing, ensure your bedroom is dark (<5 lux), quiet (<30 dB), and cool (65-68°F). A structured evening routine starting 60 min before bed (no screens, warm bath/tea) supports sleep quality.

3 Non-Negotiable Sleep Rules

01 Fixed Wake Time

Same wake time every day — even weekends. This anchors your circadian rhythm. Variability >60 min raises cardiac risk by 27%.

02 Dark + Cool Room

Blackout curtains or eye mask (<5 lux). Room at 18-20°C. Dim light cuts melatonin 50%. Cool temp helps your body drop its core temperature to trigger sleep.

03 Screen-Free Wind-Down

No screens 60-90 min before bed. Blue light (450-495nm) suppresses melatonin by 85%. Read, stretch, or do breathwork instead.

PRE-SLEEP CHECKLIST (NIGHTLY)

- ☐ No caffeine after 2 PM — 5-6 hr half-life disrupts sleep onset
- ☐ Warm shower/bath 90 min before bed — triggers core temp drop
- ☐ Phone on DND/silent in another room
- ☐ Dim all lights at least 1 hour before bed
- ☐ Journal tomorrow's top 3 tasks — clears mental loops

SUPPLEMENT	DOSE & TIMING	BENEFIT
Magnesium Bisglycinate	300-400mg, 60 min before bed	Deepens sleep, reduces cortisol
L-Theanine	100-200mg at bedtime	Alpha brain waves = calm without drowse
Ashwagandha KSM-66	300mg before bed (stress-only)	Cortisol -23%, improves deep sleep

Try the sleep hygiene protocol for 2 weeks before adding supplements. Add one at a time.

Shift Worker Adaptations

- Blackout curtains for daytime sleep — simulate nighttime darkness
- 0.5mg melatonin 30 min before desired sleep time on shift days
- Blue-light blocking glasses in last 2 hours of shift

08 · Anxiety & Mood Management

Stress Mgmt Score: 45/100 · MODERATE — daily tools required

Stress neuroscience shows elevated cortisol impairs sleep, immunity, and body composition. Your stress management score of 45/100 suggests moderate stress. Incorporate 15-20 min daily of stress-reduction: walking, meditation, or breathing exercises. Consistent sleep and movement are powerful stress buffers.

Emergency Stress Relief — Use Anytime (Under 5 Minutes)

01 Box Breathing

Inhale 4 sec -> Hold 4 sec -> Exhale 4 sec -> Hold 4 sec. Repeat 4-6 cycles. Activates parasympathetic nervous system in 5 min.

02 Physiological Sigh

2 short inhales through nose + 1 long exhale through mouth. Fastest known real-time stress reducer (Stanford, 2023).

03 5-4-3-2-1 Grounding

5 things you see, 4 touch, 3 hear, 2 smell, 1 taste. Breaks anxiety spiral by engaging the sensory cortex.

Daily Stress Prevention Protocol

TIME	ACTION	SCIENCE
Morning	5-10 min meditation or breathwork — BEFORE checking phone	Sets cortisol rhythm for the day
Midday	5-min walk every 90 min of seated work	Prevents cortisol accumulation
Evening	15-20 min tech-free. Write 3 gratitude items	Anxiety -23% in 2 weeks
Weekly	1 hr in nature (park, garden, forest)	Cortisol -12% per hour outdoors
Social	30+ min meaningful interaction 3x/week	Isolation = stress hormones like smoking

10 · Gut Health & Hydration Protocol

Addressing: constipation · Water target: 2.1L/day

Your gut influences immunity (70% of immune cells live here), mood (95% of serotonin produced here), and energy. Gut microbiome diversity is one of the strongest predictors of overall health (Gut, 2023).

4-Week Gut Healing Protocol

PHASE	EAT MORE	AVOID / REDUCE	KEY SUPPLEMENT
Week 1-2 Remove & Repair	Bone/veg broth, cooked veg, rice congee, ghee (1 tbsp in dal/rice)	Processed foods, refined sugar, excess caffeine, alcohol	Digestive enzymes if needed
Week 3-4 Repopulate & Rebalance	Homemade curd, idli/dosa, kanji, slightly green banana, garlic, oats	Same as above — gradual reintroduction only	Probiotics 10-50B CFU (empty stomach, morning)

& Gluten Intolerance — Gut Protocol Modification

Week 3-4 gut protocol lists idli/dosa & oats — these contain gluten risk. Replace with: rice idli (using only rice + urad dal, confirmed gluten-free), rice-based kanji, and certified gluten-free oats. Avoid atta-based dosa or chapati during gut healing phase.

Your Condition-Specific Fixes

- Constipation: Warm water first thing every morning. Fiber 25-30g/day (increase gradually). Isabgol (psyllium) 1 tsp before bed.

%¶ Daily Hydration Target

2.1L/day for your weight. Start each morning with 500ml warm water before any food or coffee. This alone improves digestion, reduces constipation, and boosts energy by afternoon.

11 · Skin Health

Addressing: dryness · Inside-out nutrition protocol

Skin reflects your internal health. Research (JAAD, 2023) confirms nutrition, sleep, and hydration impact skin more than topical products. Fix the root first.

Skin Nutrition Essentials

NUTRIENT	BEST FOOD SOURCES (INDIA)	SKIN FUNCTION	DAILY TARGET
Vitamin C	Amla, guava, citrus, bell peppers	Collagen synthesis, brightening	65-90mg+
Omega-3	Flaxseeds, walnuts, fatty fish, algae oil	Barrier repair, inflammation control	2g EPA+DHA
Zinc	Pumpkin seeds, chickpeas, lentils, sesame	Wound healing, acne control	8-11mg
Vitamin A	Sweet potato, carrots, spinach, eggs	Cell turnover, anti-aging	700-900mcg
Hydration	2.1L water daily	Plumpness, elasticity, toxin flush	Start with 500ml warm water morning

Your Skin Concern Protocol

📋 Dry Skin Action Plan

- Omega-3 daily (flaxseed oil/walnuts).
- Vitamin E: almonds, sunflower seeds.
- Apply coconut/almond oil WHILE skin is still damp (within 3 min of bathing).
- Avoid hot showers — they strip natural oils.

12 · Supplement Strategy

gorika's evidence-based stack for your profile

Start with food optimization first. Then add supplements one phase at a time — this protocol tells you WHEN to add each, HOW to stack safely, and WHY it applies to your profile. Never add more than one new supplement per 2 weeks.

Phase-by-Phase Supplement Protocol

PHASE	SUPPLEMENT	DOSE + TIMING	WHY FOR YOU	COST/MONTH
Phase 1 Weeks 1-4 Foundation	Vitamin D3	60,000 IU once/week × 8 wks, then 2,000 IU daily with fat	70%+ Indians deficient. Affects mood, immunity, muscle function	Rs.150-200/mo
	Magnesium Bisglycinate	300-400mg at bedtime (NOT citrate form)	Supports sleep quality + reduces muscle cramps	Rs.350-500/mo
	Omega-3 (EPA+DHA)	1,000-2,000mg fish oil with largest meal	Anti-inflammatory; brain + cardiovascular health	Rs.500-800/mo
	Vitamin B12 (methylcobalamin)	500mcg sublingual daily (under tongue)	Chronic sleep deprivation & high stress deplete B12 absorption. Verify with blood test before supplementing.	Rs.200-400/mo
Phase 2 Weeks 5-8 Targeted	Ashwagandha KSM-66	300mg morning + 300mg evening (with food). Cycle: 5 days on, 2 off	Your stress score needs this. Reduces cortisol 23%. Improves sleep and energy	Rs.400-600/mo
	Probiotics (multi-strain)	10-50B CFU on empty stomach, morning	You have constipation — probiotics target root cause, not symptoms	Rs.400-700/mo
Phase 3 Weeks 9-12 Maintenance	Selenium + Zinc (thyroid stack)	Selenium 200mcg/day + Zinc 25mg with food. Never exceed 400mcg Se/day	Critical for T4->T3 thyroid conversion. Your thyroid condition requires this	Rs.300-500/mo
	Curcumin + Piperine	500-1,000mg curcumin + 20mg piperine (black pepper extract)	Anti-inflammatory. Piperine increases absorption 2000%. Take 2 hrs apart from iron supplements	Rs.400-600/mo

Stacking Rules — What to Combine, What to Avoid

SUPPLEMENT	COMBINE WITH	NEVER COMBINE WITH	REASON
Magnesium	Vitamin D3, B6, glycine (bedtime)	Zinc (same dose — compete)	Mg + D3 synergistic. Mg + Zinc = block absorption
Ashwagandha	Magnesium (evening), Rhodiola, B-complex	Thyroid meds (without doctor)	Modulates thyroid — may need medication adjustment
Omega-3	Vitamin D3, Vitamin E, CoQ10	Blood thinners/aspirin (without advice)	Mild blood-thinning effect — compounds anticoagulants

Quality: Look for USP/NSF/FSSAI certification. Avoid proprietary blends. Store away from sunlight. Always consult your physician before starting, especially if on medication.

13 · Recommended Lab Tests

gorika's prioritized panel — thyroid & full screening

Moving from guesswork to data-driven health requires clinical baselines. These tests are selected specifically for YOU based on your quiz data, health scores, BMI, and medical conditions. All available at Thyrocare, Dr. Lal PathLabs, SRL Diagnostics, Metropolis.

CRITICAL — Do This Week — Do all before starting plan

Vitamin D3 (25-hydroxyvitamin D) 1600–1,200 When: Week 0	76% urban Indians deficient. Affects mood, immunity, muscle function, and sleep.
Complete Blood Count (CBC) 1200–400 When: Week 0	Baseline for immune health, anaemia screening, and infection markers.
Thyroid Panel (TSH, T3, T4, Anti-TPO) 1400–800 When: Week 0 — BEFORE starting plan	You have a thyroid condition — TSH is critical for metabolic regulation.

HIGH PRIORITY — Before Week 2 — Complete within first 2 weeks

HbA1c + Fasting Insulin + Fasting Glucose 1450–850 When: Week 0	Your BMI 25.4 increases insulin resistance risk. HbA1c reveals 3-month blood sugar history.
---	---

MEDIUM — Within First Month — Complete by Week 4

Lipid Profile (LDL, HDL, Triglycerides) 1200–500 When: Week 0–2	Age 28 + BMI 25.4 = elevated cardiovascular risk. Lipids are silent until a crisis.
Iron + Ferritin + TIBC 1400–700 When: Week 0–4	Iron deficiency is the most common nutrient deficiency in India — causes fatigue, hair loss, poor
hs-CRP (High-Sensitivity C-Reactive Protein) 1300–600 When: Week 0	Measures systemic inflammation — the root driver of most chronic disease.

Testing Schedule & Protocol

TIMEPOINT	ACTION	PURPOSE
Week 0 (NOW)	Baseline: All CRITICAL + HIGH tests	Establish data foundation before plan starts
Week 12 (Day 90)	Retest: Vitamin D, CBC, Thyroid (if applicable)	Measure impact of your 90-day lifestyle changes
Annual	Full panel repeat	Ongoing health monitoring

Estimated total: Basic panel Rs.1,500–3,500 | Comprehensive panel Rs.3,500–6,000. Always fast 10–12 hours before blood tests (water is OK). Draw thyroid blood before 10am for accuracy.

12-Week Phased Cycles + Stacking Logic

gorika · Stress: MODERATE · Sleep: 69/100 · BMI: 25.4 — Personalized cycling & timing protocol

This protocol goes BEYOND the basic supplement list in your core plan. It tells you WHEN to cycle each supplement, HOW to stack them safely, and HOW to adjust based on your results. Designed for gorika: 28 yrs, BMI 25.4, stress level MODERATE.

PHASE	SUPPLEMENT	DOSE + TIMING	PURPOSE	COST/MONTH INR
Phase 1 Weeks 1–4 Foundation	Vitamin D3 (loading)	60,000 IU once/week for 8 wks -> then 2,000 IU daily	Baseline deficiency in 70%+ Indians. Affects mood, immunity, muscle function.	Rs.150–200
Phase 1 Weeks 1–4	Magnesium Bisglycinate	300–400mg at bedtime (not citrate)	Your sleep needs this. Magnesium reduces cortisol + improves deep sleep.	Rs.350–500
Phase 1 Weeks 1–4	Omega-3 (EPA+DHA)	1,000–2,000mg daily with largest meal	Anti-inflammatory. Improves insulin sensitivity and cardiovascular markers.	Rs.500–800
Phase 2 Weeks 5–8 Targeted	Ashwagandha KSM-66	300mg morning + 300mg evening (with food)	Stress adaptation + testosterone support. Cycle: 5 days ON, 2 days OFF.	Rs.400–600
Phase 2 Weeks 5–8	Probiotics (Multi-strain)	10–50B CFU on empty stomach, morning	You have constipation — probiotics address root cause, not symptoms.	Rs.400–700
Phase 3 Weeks 9–12 Maintenance	Selenium + Zinc (thyroid stack)	Selenium 200mcg/day + Zinc 25mg with food	Selenium is critical for T4->T3 conversion. Never exceed 400mcg/day.	Rs.300–500

Supplement Stacking Rules — What to Combine, What to Avoid

STACK	COMBINE WITH	NEVER COMBINE WITH	REASON
Magnesium	Vitamin D3, B6, glycine (bedtime)	Zinc (same dose — compete for absorption)	Mg + D3 synergistic. Mg + Zinc = block each other.
Ashwagandha	Magnesium (evening), Rhodiola, B-complex	Thyroid medication (without doctor approval)	Ashwagandha modulates thyroid activity. May require medication adjustment.
Omega-3	Vitamin D3, Vitamin E, CoQ10	Blood thinners or aspirin (without medical advice)	Omega-3 has mild blood-thinning effect — compounds anticoagulants.
Curcumin	Piperine (20mg increases absorption 2000%), healthy fat	Iron supplements (binds and reduces iron absorption)	Take curcumin 2 hours apart from iron supplements.

15 · Progress Tracking & Weekly Check-ins

gorika's 90-day transformation milestones

Every Sunday: 3-Minute Self-Check (Fill This In)

Metric	Score (1-10)	This Week	Notes / Change
Energy (morning)	___/10		
Sleep quality	___/10		
Stress level	___/10		
Workouts done	___/target		
Nutrition adherence	___%		
Water target met?	Y / N		

Monthly Assessment — Weeks 4, 8, 12

Body & Performance Checks
☐ Weight + waist + hip measurements (same time each month)
☐ Progress photos: same light, same angle, same clothing
☐ Performance test: push-ups in 60 sec, plank hold time
☐ Resting heart rate (morning, before rising)
☐ Blood work recheck vs. baseline (Week 12 minimum)

What to Expect — Transformation Timeline

Timeframe	What You'll Notice	Key Win
Week 1-2	Sleep improves. Energy begins to stabilize. Some adjustment discomfort is normal.	Consistent bedtime locked in
Week 3-4	Mood lifts. Stress reduces. Digestion improving. Workouts feel easier.	First monthly assessment
Week 5-8	Visible body composition changes. Sustained energy all day. Strength gains.	Supplement stack phase 2
Week 9-12	Habits feel automatic. Confidence up. Biomarkers improving. Major transformation.	Final blood work recheck

Consistency beats perfection. Even 80% adherence over 90 days produces meaningful, lasting results.

16 · 90-Day Action Plan

gorika's phase-by-phase transformation roadmap

PHASE 1: FOUNDATION [Weeks 1-2]

- ' Read this blueprint fully — understand the WHY behind every recommendation
- ' Lock consistent wake time and meal window (most important habit)
- ' Stock your kitchen from the nutrition section grocery list
- ' Set up tracking (HealthifyMe, MyFitnessPal, or notebook)
- ' Book baseline blood tests (CRITICAL tests, Week 0)
- ' Start 3x/week movement routine — even 20-minute walks count

PHASE 2: MOMENTUM [Weeks 3-6]

- ' Weekend meal prep: cook 2-3 meals in advance
- ' Add daily breathwork (5 min morning, before phone)
- ' Increase workout intensity/frequency by 10-15%
- ' Week 4: Complete first monthly assessment — take photos + measurements
- ' Begin Phase 1 supplements (Vitamin D3 + Magnesium first)

PHASE 3: OPTIMIZATION [Weeks 7-12]

- ' Adjust calories/macros based on Week 4 assessment results
- ' Progressive overload: increase weights every 2 weeks
- ' Week 8: Second monthly assessment — compare to baseline
- ' Refine supplement stack based on how you feel at Week 8
- ' Week 12: Final assessment + blood work recheck + CELEBRATE

%¶ The #1 Rule of This 90-Day Journey

gorika — do NOT try to do everything at once. Pick ONE habit from each phase. Add the next only when the first feels automatic. Consistency at 80% beats perfection at 20%.

Remember

gorika, this blueprint is your evidence-based roadmap to better health. You don't need to be perfect — you need to be consistent. Start with the Top 3 Actions and build from there.

Small, consistent steps create lasting transformation. You have everything you need to succeed. Trust the process.

Disclaimer: This blueprint is for educational purposes and does not constitute medical advice.

Always consult qualified healthcare professionals before making significant lifestyle changes.

Individual results may vary based on adherence, genetics, and pre-existing conditions.
